

are you ready to
make an impact?

microGauge AG is a newly founded spin-off company of ETH Zurich. Located in the heart of one of the world's leading research institutions, we are developing next generation vacuum sensing solutions for the vacuum coating industry.

Internships for Engineers & Scientists in Education (6)

Embedded System Design & Feedback Control

As an Intern / Master Student in our dynamic start-up, you will get the opportunity to work on problems that really matter. With access to experts in literally every domain, state of the art hardware equipment and software tools, you will be developing and implementing a closed loop feedback system that controls the operation of our cutting-edge sensor devices.

Your skills:

- **Previous programming experience in C (required)**
- **Previous programming experience in VHDL (advantageous)**
- **Solid understanding in control systems theory (advantageous)**

You are a highly motivated individual? You are open-minded and are willing to go the extra mile to get the job done? You are a team player with excellent soft skills and you have always wanted to know what it feels like to be a part of a start-up company? If this is you, we are very excited for you to join our team for this internship and **a potential full-time follow-up position.**

We are looking forward to receiving your application including C.V., most recent transcript of your grades, two references and all other documents that may support your application via E-Mail to careers@microgauge.ch.
